

aspects of water policy is central to Integrated Water Resources Management (IWRM). SEEAW has a unique contribution to make to IWRM because it is the only approach that integrates economic accounts with accounts for water use and supply in a framework that supports quantitative analysis. Based on SEEAW framework, this paper tries to start the implementation of SEEAW at regional level in China. According to the standardized information system which harmonizes information from different sources, various relevant departments, a physical water supply and use table (SUT) in Zhangye City, an arid area in Northwest China, is compiled.
