

Chapter 6

SOLUTION METHODOLOGY

Solution methodology refers to the approach or process used to solve a problem or address a specific challenge. It outlines the steps, techniques, and tools employed to analyze, design, develop, and implement a solution. The choice of methodology depends on various factors, including the nature of the problem, project requirements, team capabilities, and organizational preferences.

6.1 FLOWCHART

Flowcharts can be simple or complex, depending on the level of detail required. They provide a clear visual representation of the process flow, making it easier to identify bottlenecks, redundancies, or areas for improvement as shown in the fig 6.1.
